

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-31 (canceled).

32 (currently amended). A mounting for a wave plate comprising:

- (a) an enclosure having a frame adapted to support said wave plate for rotation;
- (b) a bendable member having a first end affixed to said frame;
- (c) a substantial length of said bendable member proximate to a periphery of said wave plate forming an arc shape; and
- (d) said bendable member having a second end; and
- (e) said frame having a backing proximate said substantial length of said bendable member, said backing inhibiting separation of said substantial length from said periphery of said wave plate.

33 (previously presented). The mounting of claim 32 further comprising rotating said wave plate by moving said bendable member.

34 (previously presented). The mounting of claim 33 further comprising a retaining mechanism to selectively inhibit the rotational movement of said frame.

35 (previously presented). A mounting for a wave plate comprising:

- (a) a frame adapted to retain said wave plate;
- (b) a supporting structure adapted to support said frame for rotation;
- (c) a bendable member having a first end affixed to said frame;
- (d) a substantial length of said bendable member proximate to a periphery of said wave plate forming an arc shape;
- (e) said bendable member having a second end; and

(f) said support structure is adapted to support said wave plate for rotation exceeding 180 degrees.

36 (previously presented). A mounting for a wave plate comprising:

- (a) a frame adapted to retain said wave plate;
- (b) a supporting structure adapted to support said frame for rotation;
- (c) a bendable member having a first end affixed to said frame;
- (d) a substantial length of said bendable member proximate to a periphery of said wave plate forming an arc shape;
- (e) said bendable member having a second end; and
- (f) said support structure is adapted to support said wave plate for rotation exceeding 90 degrees.

37 (canceled). A projection system comprising:

- (a) a beam splitter;
- (b) an imaging device;
- (c) a light source;
- (d) a projection element wherein light from said light source passes along an optical path through said beam splitter and is imaged by said imaging device prior to passing through said projection element; and
- (e) a wave plate supported within said optical path that is rotatable exceeding 90 degrees.

38-45 (canceled).
